April 30, 2026

*Starting 2026, the Village of Burton Board of Public Affairs requests Backflow Inspection Reports be filed annually no later than JUNE 30th. If the report is not turned into the office by June 30th, your services will be shut off.

Protection of the water supply is of the utmost concern to the Village of Burton Utilities Department, and we feel that it should be a high priority with you also. You have a backflow preventer installed at your facility which is a vital link in the protection. We request your cooperation in having your backflow preventer tested.

Ohio Administrative Code Chapter 3745-95 requires the public water supplier to protect the public water system from cross-connections and prevent backflow situations. The public water supplier must conduct cross-connection control inspections of their water customers' property to evaluate hazards.

This is required annually by the Ohio Environmental Protection Agency (EPA) and the Village of Burton's Utilities Department.

It is the property owner's responsibility to have the backflow preventer tested and a copy of the test results supplied to the Village of Burton.

The backflow preventer testing results should be reported on the attached form and returned to the Village of Burton to Larnold@villageofburton.org OR USPS to PO Box 408 Burton OH 44021.

If you have any questions, please contact the Village of Burton Utilities Department at 440-834-1408 OR the Village of Burton office at 440-834-4474. Information can be found on the Village of Burton website (<https://villageofburton.org/water-sewer>) under Water and Sewer Dept, Backflow Preventers.

We appreciate your cooperation with the Ohio Environmental Protection Agency and the Burton Utility Department!

Thank you

Village of Burton Utilities
